

Science Week

The week of the 1st – 5th December was a very exciting week at Fir Tree; Science Week! The children spent the whole week investigating some Roman artefacts that had been 'discovered' in the school grounds.

The children's job was to collect evidence and make careful observations to identify what the objects were and what they could have been used for. Then, having been given three possibilities, the children had to decide who the artefacts belonged to.

All of the lessons during the week were linked to the investigation, providing an exciting and stimulating learning environment. The children really enjoyed the week and I think this showed in the quality and variety of work produced. Each class worked extremely hard throughout the week; investigating all the evidence and deciding who it all pointed to.

Here are some examples of the fantastic work that went on throughout the week:

Year 5's predictions about what the objects could be.

Apple Class' display board to show their findings.

Maple Class created clay reproductions of the artefacts.

Year 3's display showing the findings of their Investigation.
